# Component: Card

## 1 Overview

Card Component allows web authors to display Card icons.

## 2 Business Use Case

It is a way to display Card icons which takes the end user to corresponding link.

## 3 Design

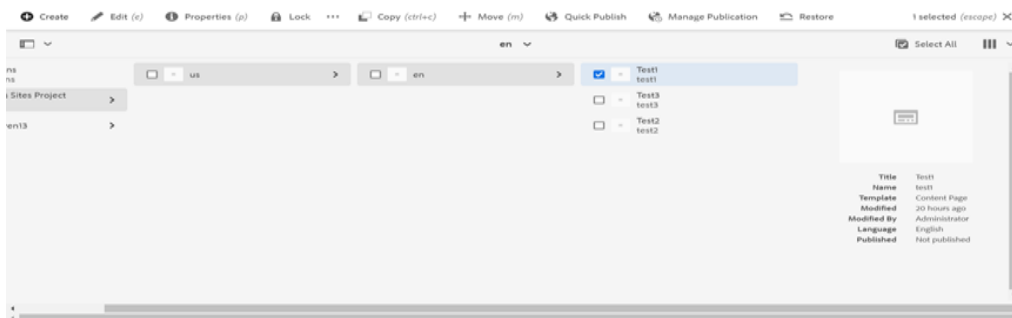

The Card Component is a nested multifield component.

The Card component contains the authoring for Card Columns, Card Variant, Image AltText, Pre Title, Title, Description, CTA List (Multifield).

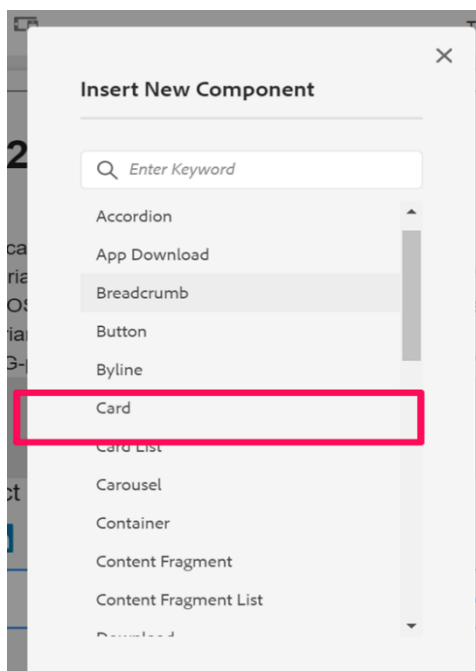

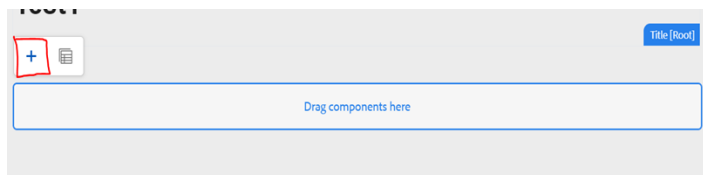

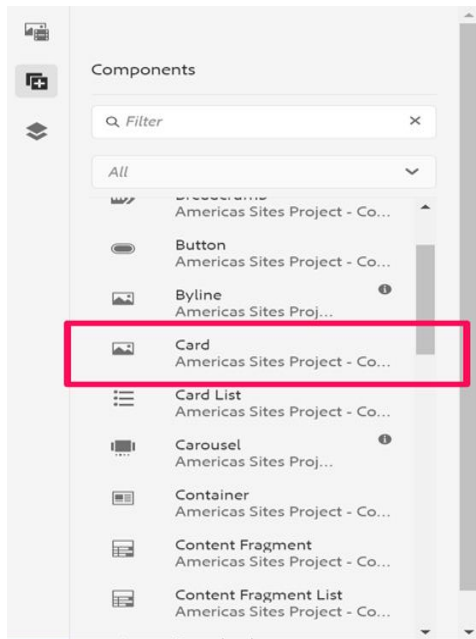

CTA List is a multifield which contains CTA Text, CTA Path, CTA Theme.

## 4 Authoring Steps

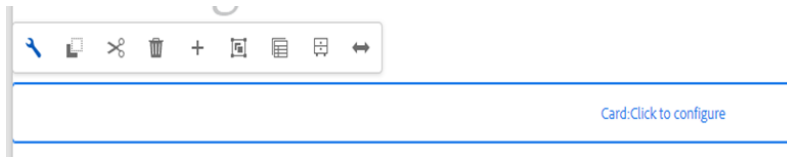

- Step 1: Create a new page or open an existing page by selecting the page and click on Edit option.

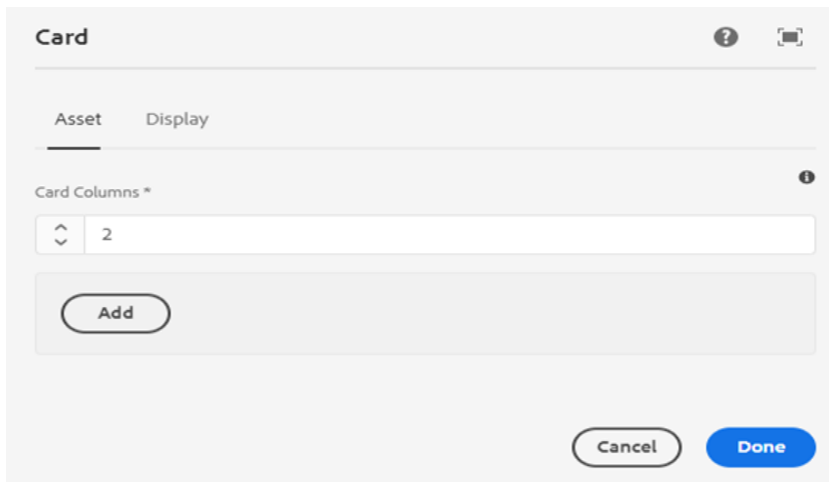

- **Step 2:** Once the Page is opened, go to the content panel from the top left side panel and then click on the component tab and Drag the Card Component from the left side panel and drop it inside the Layout Container. Or choose it from the available component list

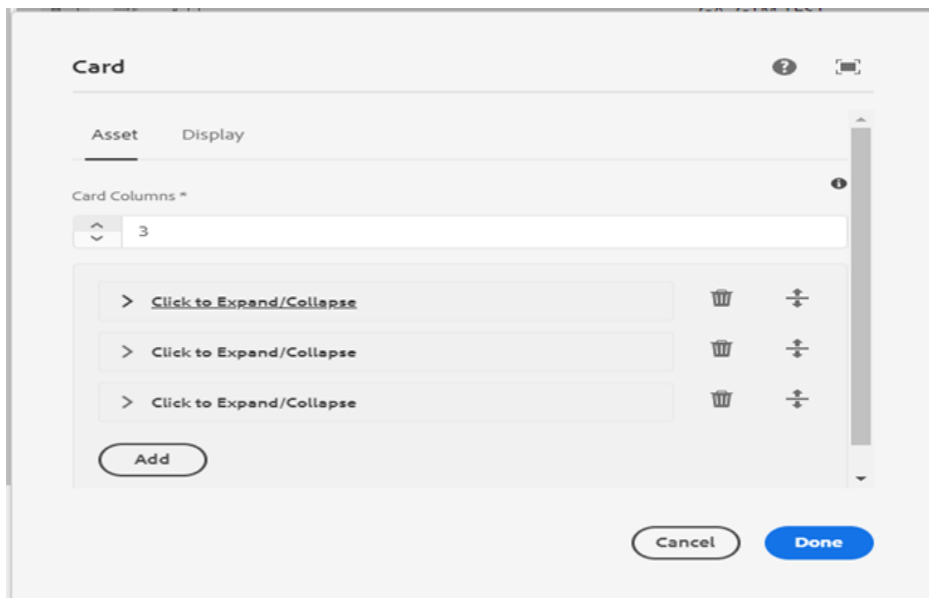

- **Step 3:** Select the Card component and click on the wrench icon to open the component dialog.

- **Step 4:** Enter the Card details in Card Dialog as per below snap

- **Step 5:** Click Add and expand to add and configure card icons.

- Step 6: Enter the below fields to configure each card icon added.
